Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>INDIANA, South Central</b>				
<b>DUBOIS COUNTY --- 1.3 ENE MILLERSPORT [38.34, -87.00], 2.0 ENE CELESTINE [38.40, -86.75]</b>				
	02/28/11 03:19 EST		0.50M	Tornado (EF2, L: 14.17 mi , W: 225 yd)
	02/28/11 03:30 EST	1	0	Source: NWS Storm Survey
<p>An NWS storm survey confirmed that an EF-2 tornado with two segments touched down in Dubois county. The tornado first touched down just north of Duff east of County Road 650W. At touchdown straight-line wind damage was also observed to the south of the tornado. Damage to several large metal buildings, a large barn, and a radio tower were observed as the tornado crossed Dubois County south of Jasper.</p> <p>After a brief break in the path, the tornado touched down four miles southwest of Celestine and took a slight turn to the northeast. The most significant damage along this segment was in Celestine near Ellsworth Road. Damage included roofs blown off two brick homes with the walls collapsed in one home. In addition a double-wide trailer was blown off its foundation and an RV was tossed across the road. One minor injury was reported. The tornado was rated EF-1 with winds of 100 mph and a path width of 75 yards in the first segment. It was rated EF-2 with winds of 125 mph and a path width of 225 yards in the second segment.</p>

## Storm Data and Unusual Weather Phenomena - February 2011

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

An NWS storm survey confirmed a tornado which crossed the Ohio River from Clark county, IN to Jefferson county, KY. The tornado was rated an EF-0 in Indiana and an EF-1 in Kentucky. This tornado touched down in Clark County near Centennial Boulevard. Large hardwood trees were uprooted along the tornado's path towards Utica. A house on Middle Road had a tin roof blown off and thrown 200 yards. A couple of garage doors were dented in. Winds along this part of the tornado path were estimated to be 85 mph with a path width of 100 yards.

**A cold front moved through southern Indiana and central Kentucky on the morning of February 28. A strong low level jet developed ahead of this front with winds of 60-80 knots at 2-3 thousand feet, resulting in very high speed shear and storm relative helicity values. A squall line with bowing segments developed to the west of the Louisville forecast area and crossed the region during the early to mid morning hours. This line produced multiple tornadoes across the region as well as straight line wind damage.**

---

**PERRY COUNTY --- TELL CITY [37.95, -86.77], 2.4 WSW TELL CITY [37.94, -86.81], 2.1 WSW CANNELTON [37.91, -86.79], 0.9 NNW CANNELTON [37.93, -86.76]**

02/28/11 12:15 EST	0	Flood (due to Heavy Rain)
02/28/11 23:59 EST	0	Source: COOP Observer

The Ohio River at Tell City rose above flood stage around mid-day on February 28. With several additional heavy rain events in March, the river would not crest until March 15, and would remain above flood stage until March 21.

**Heavy rains during the last week of February put the Ohio River above flood stage at Tell City.**

### KENTUCKY, Central

---

02/07/11 10:00 EST	0	Heavy Snow
02/07/11 22:00 EST	0	

During the early morning hours on February 7th, weak low pressure associated with an amplifying trough over the lower Missouri Valley developed across northern Alabama. During the day, this low moved northeast across southern Tennessee. To the north of the track of this surface low, a narrow band of heavy wet snow developed along a thin track from southeast of Paducah through central Kentucky and into the Bluegrass Region. Even with temperatures hovering around 34 degrees, snow fell at such a fast rate that snow accumulated at a rate of an inch an hour. A few locations in central Kentucky received 4 to 5 inches.

A low pressure system tracked from Texas across Kentucky during the afternoon and evening of Feb. 24. The warm front associated with this low was able to move north to around the Bluegrass Parkway with the cold front sweeping through overnight. Despite limited instability, strong low level winds and shear were enough to support some severe thunderstorms across south central Kentucky. In addition, with precipitable water values near 1.5 inches, these storms were able to produce heavy rains. This led to flash flooding across south central Kentucky as well.

<b>BUTLER COUNTY --- WOODBURY [37.18, -86.65], 0.5 ENE MORGANTOWN [37.22, -86.69], 1.7 ESE ABERDEEN [37.24, -86.65], 3.3 ENE WOODBURY [37.20, -86.60]</b>
